### Ultimate accuracy from ultra-pure to high conductivity applications.

Contacting conductivity sensor with a nominal cell constant  $k = 0.5 \text{ cm}^{-1}$ , 3/4-inch male NPT threaded PPS body, 6 m analogue cable, and graphite electrode.

Measuring range 0 - 1000  $\mu\text{S/cm}$ , 0,001 - 20  $\text{M}\Omega$ .

#### High performance design

These enhanced performance sensors are manufactured to exacting tolerances using high quality, rugged materials for demanding applications including ultra-pure water, clean-in-place (CIP), and boiler/condensate monitoring. Each sensor is tested to determine its unique, absolute four-digit cell constant. Simply key in this constant (Hach's easy DRY-CAL™ method) when configuring the analyzer to ensure the highest possible measuring accuracy. Also, each sensor has a Pt 1000 RTD temperature element built into its tip for exceptionally fast response to changes in temperature with  $\pm 0.1^\circ\text{C}$  accuracy.

#### Resistivity and conductivity measurement capability

These enhanced performance sensors measure from 0.057  $\mu\text{S/cm}$  or 18.2  $\text{M}\Omega$  (theoretically pure water) up to 200,000  $\mu\text{S/cm}$ .

#### Versatile mounting styles

**Non-Metallic General Purpose Sensors** have graphite electrodes and 3/4-inch male NPT threaded PPS bodies. Mount into a standard 3/4-inch pipe tee, 1-1/2-inch Hach union hardware (for cell constant  $k=10$  sensor only), or fasten onto the end of the pipe.

#### Full-Featured “Plug and Play” Hach SC Digital Controllers

There are no complicated wiring or set up procedures with any Hach SC controller. Just plug in any combination of Hach digital sensors and it's ready to use—it's “plug and play.”
