**The QP1680 Analyser measures Total Organic Carbon (TOC) and Total Nitrogen (TN<sub>b</sub>) in one sample.**

The QP1680 is available as a combined TOC and TN<sub>b</sub> analyser or for the individual parameters TOC or TN<sub>b</sub>.

The most important features include:

- Direct sample injection eliminates sample contact with valves and the built-in injection syringe, which minimizes the risk of sample carry-over.
- Large diameter sample aspiration tubing can handle particles up to 800 µm, expanding possible applications and reducing clogging.
- Integrated stirrer for each sample position homogenizes particle-containing samples before injection.
- Small footprint with integrated 65-position auto-sampler requires less space in the laboratory (an auto-sampler with 96 positions is also available as an alternative).
- Simple operation, data analysis and system diagnosis thanks to an intuitive software package.
